Certificate

This is a bonafide record of the work done by FATHIMA SHEEN K S (TKM24MCA-2034) in the Third Semester for the lab course Machine Learning (23MCAJ301) towards the partial fulfillment of the degree of Master of Computer Applications during the academic year 2025-2026.

INDEX

S.NO	TITLE	PAGE.NO
1.	Write a python program mean, median, mode attributes of iris dataset.	4
2.	Create a histogram to visualize the distribution of sepal length across all Iris samples.	6
3.	Create a boxplot to compare sepal length across the three Iris species	7
4.	Create a scatterplot to compare petal length and petal width, colored by species	8
5.	Histogram Analysis for Normal Distribution in the Iris Dataset	10
6.	using a dataset (e.g., Iris) for k-NN classification	11
7.	Using the Iris dataset, implement a Gaussian Naive Bayes classifier	12
8.	Implement a Decision Tree classifier using the Iris dataset, apply a pruning technique to prevent overfitting, evaluate its accuracy visualize the decision tree	13
9.	Explore the concepts of multiple linear regression and correlations to fit regression models using House price dataset also display the values of coefficient and intercept	14
10.	Write a program to classify the Iris flower dataset using a Neural Network	16
11.	Implement program to solve the Iris flower classification problem using Support Vector Machine(SVM) with the scikit-learn library	19
12.	Programs to implement k-means clustering technique using any standard dataset available in the public domain.	25
13.	Programs to implement Random Forest technique using any standard dataset available in the public domain.	26
